Frontend Developer

Date of Birth: 14 June 1996

Frontend Developer with 3 years of experience: 2 years in employment (iGaming) + 1 year of freelancing. Open to job offers. Currently working as a Frontend Developer at MaxBitSolution (iGaming), where I develop responsive interfaces, create and customize WordPress themes and templates within the SEO department.

I have strong skills in HTML, CSS, JavaScript, WordPress, and PHP. I am self-taught in frontend technologies and apply them in practice without formal paid courses. I continuously improve my frontend skills and systematically explore applied AI as a powerful assistant tool.

I deliver turnkey websites: purchasing hosting and domain, integrating layouts into WordPress, working with PHP hooks, configuring admin panels, and creating custom plugins.

Additionally: React (practicing — functional components, hooks, routing), CI/CD (automated deployment via GitLab CI), Docker (using in commercial development for project containerization). I also work with Tailwind CSS, SCSS, Gulp, and Webpack when needed.

Professional Experience

2024 – Present | MaxBitSolution (iGaming)

Frontend Developer / SEO Department

Key Responsibilities & Achievements:

Developed responsive interfaces with SEO requirements in mind — improved page speed metrics by 30-40% without compromising quality.

Integrated ready-made layouts into WordPress (building themes from scratch) — 15+ successfully launched projects.

Customized WordPress themes, templates, and plugins to meet SEO requirements.

Implemented [Schema.org](https://schema.org) microdata (JSON-LD) — boosted CTR by 20-30% through rich snippets (stars, bonuses, ratings).

Optimized Core Web Vitals — achieved Google's green zone (good LCP, FID, CLS scores).

Mobile-first adaptation — 90%+ of traffic comes from mobile devices, websites work flawlessly on all screen sizes.

Generated and managed referral links with UTM tags — full tracking of partner traffic without losses.

Configured browser caching (Cache-Control, Expires) — reduced load time for returning visitors by 50%.

Developed custom WordPress plugins tailored to unique business needs.

Collaboration with SEO Department:

Understand SEO specialists' requirements and quickly fix bugs affecting search rankings — average resolution time: 2-4 hours.

Set up 301 redirects, canonical tags, robots.txt, sitemap.xml, meta robots.

Generated and maintained sitemap.xml — 100% indexing of key pages.

Resolved indexing issues based on Google Search Console data — significantly reduced error count.

Clear internal workflow: task → analysis → solution → testing → deployment.

2023 – 2024 | Freelance

Frontend Developer

Projects & Responsibilities:

Built turnkey websites on WordPress — from concept to launch (successfully completed projects for small and medium-sized businesses).

Integrated ready-made layouts into WordPress from scratch, creating custom themes without using pre-built templates.

Managed hosting, domain registration, SSL certificates — full technical support.

Worked with PHP hooks (actions/filters) to extend functionality.

Developed fully responsive websites — perfect performance on PC, tablets, and phones (even when responsiveness wasn't included in the original design).

Configured WordPress admin panel — clients could update content independently without coding knowledge.

Worked from references — built websites even without a ready-made mockup, based on the client's description and ideas.

SEO optimization during the development phase — clean semantic markup, microdata, fast loading speed.

Client communication: explained how the WordPress engine works so clients could manage their sites without technical expertise. Helped clients navigate the admin panel, add content, and configure pages.
